

ASFALIS EX 4.0

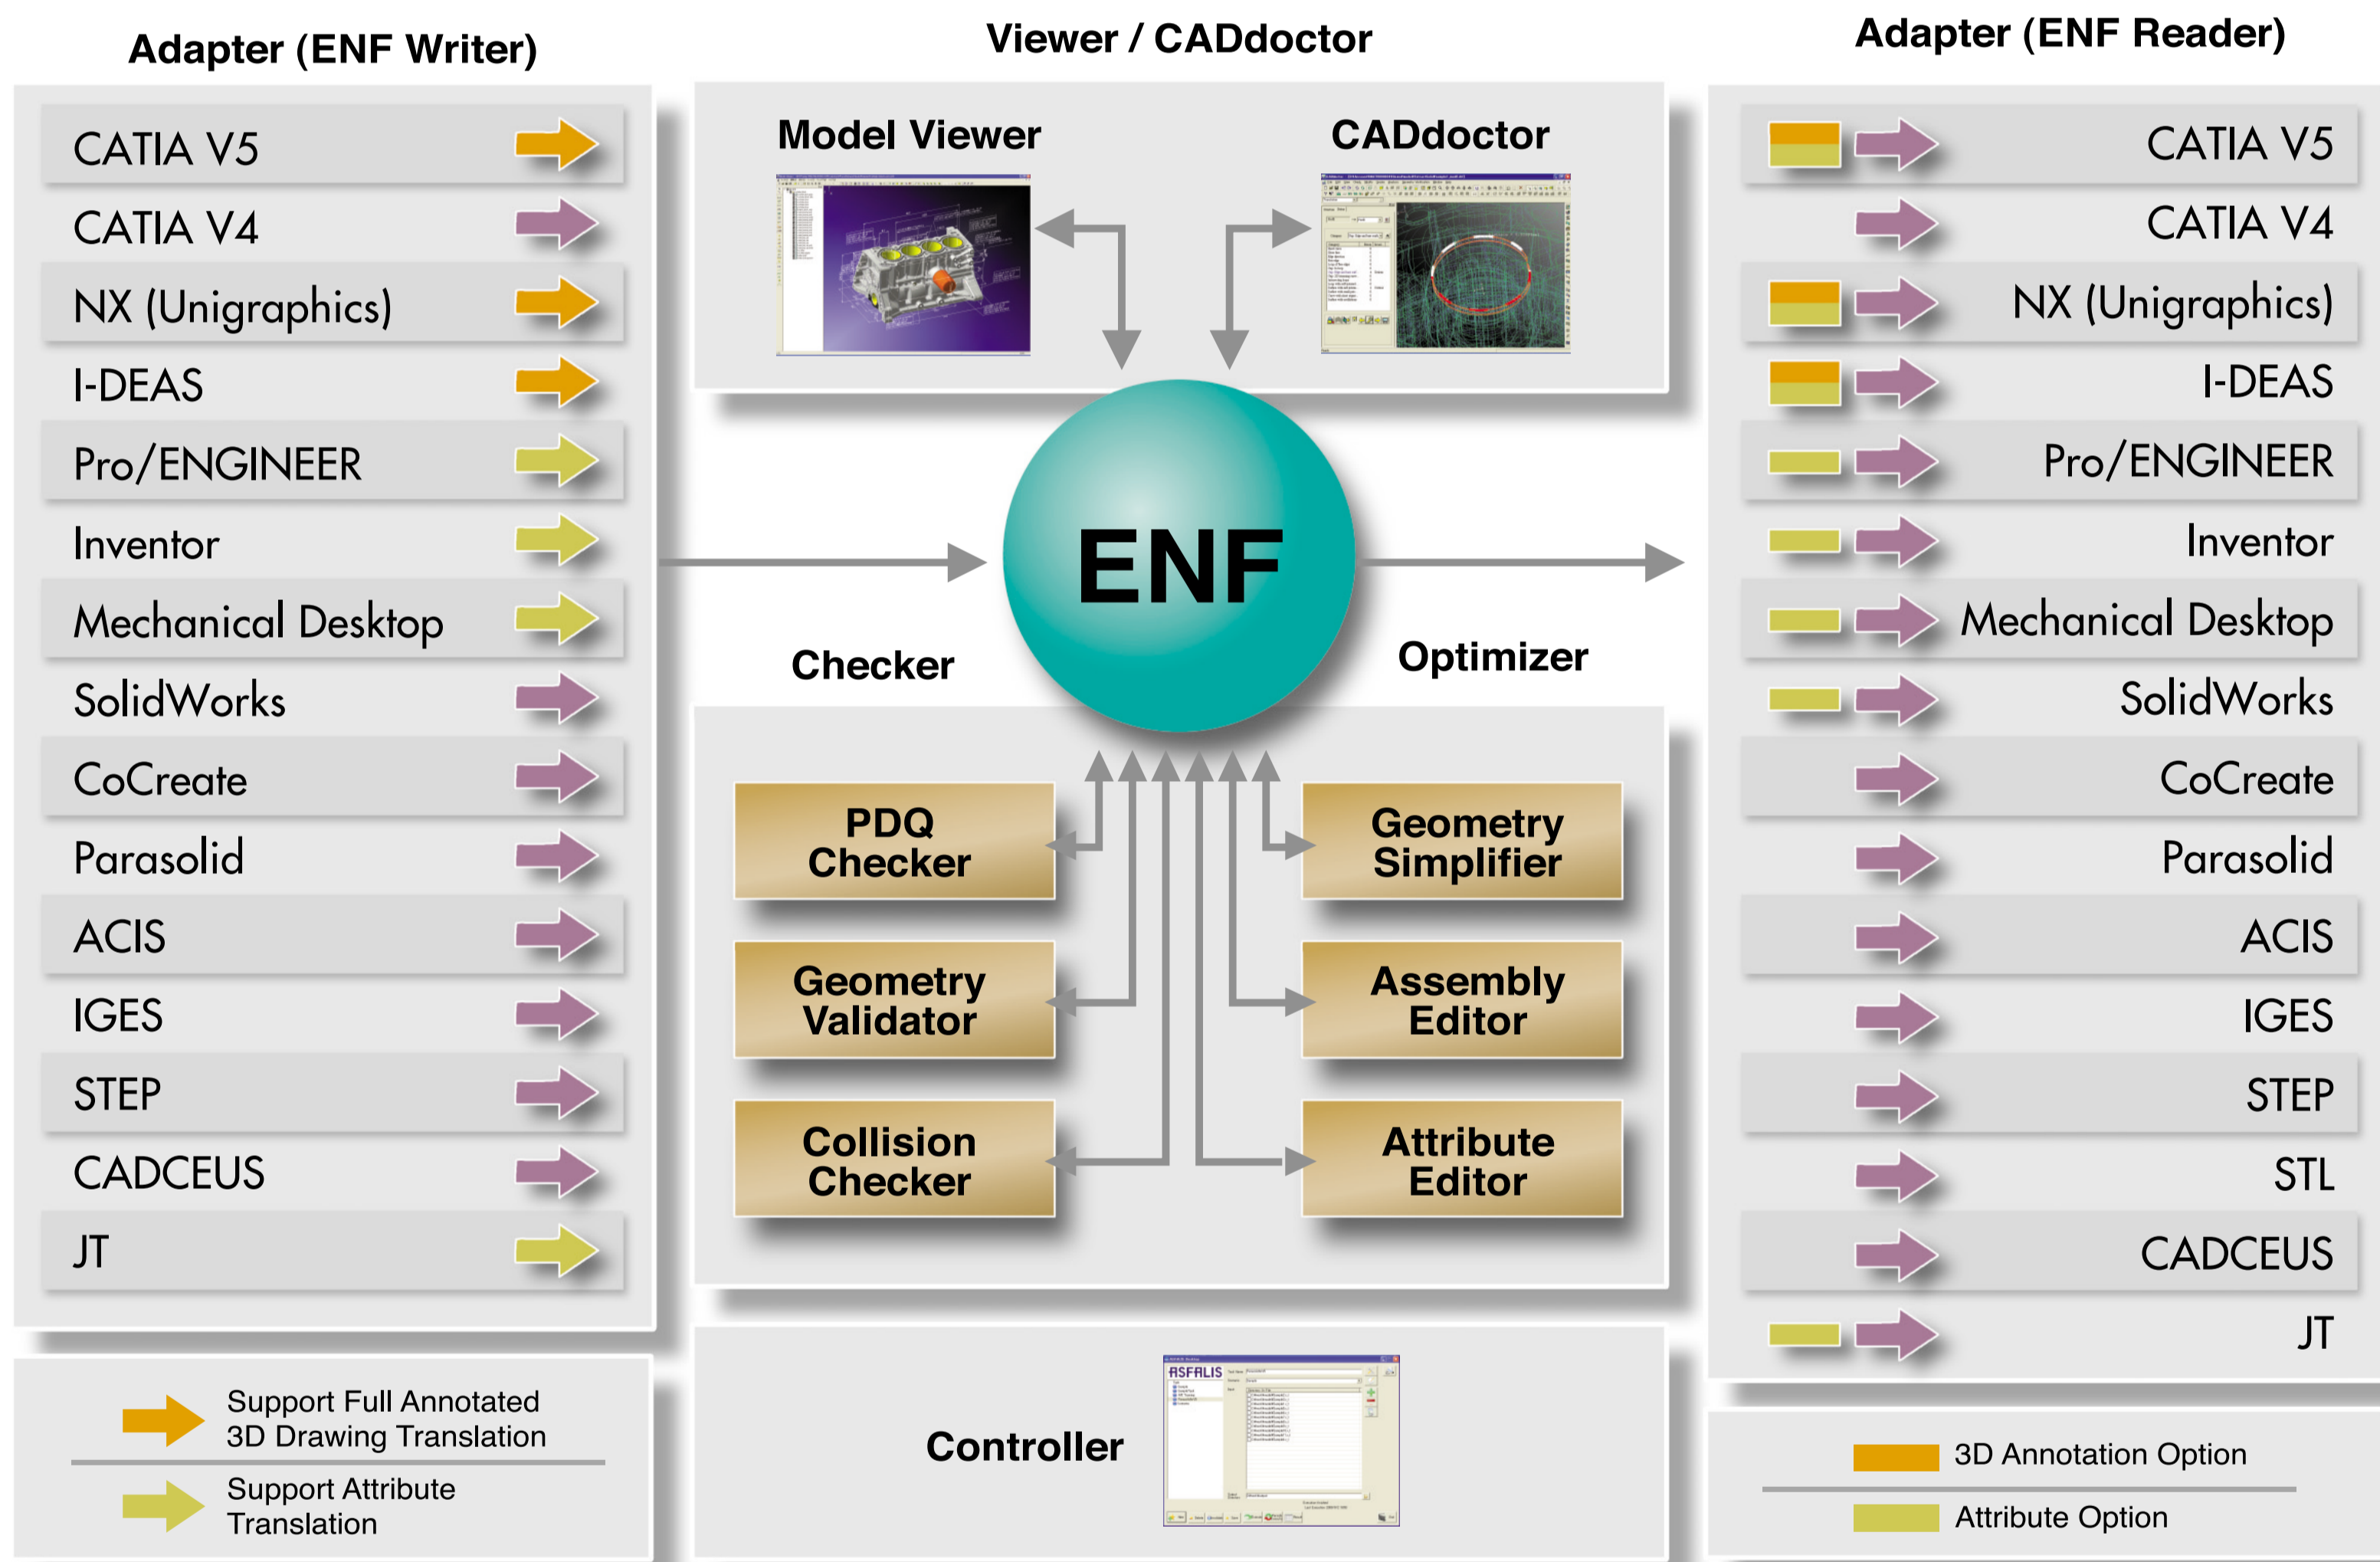

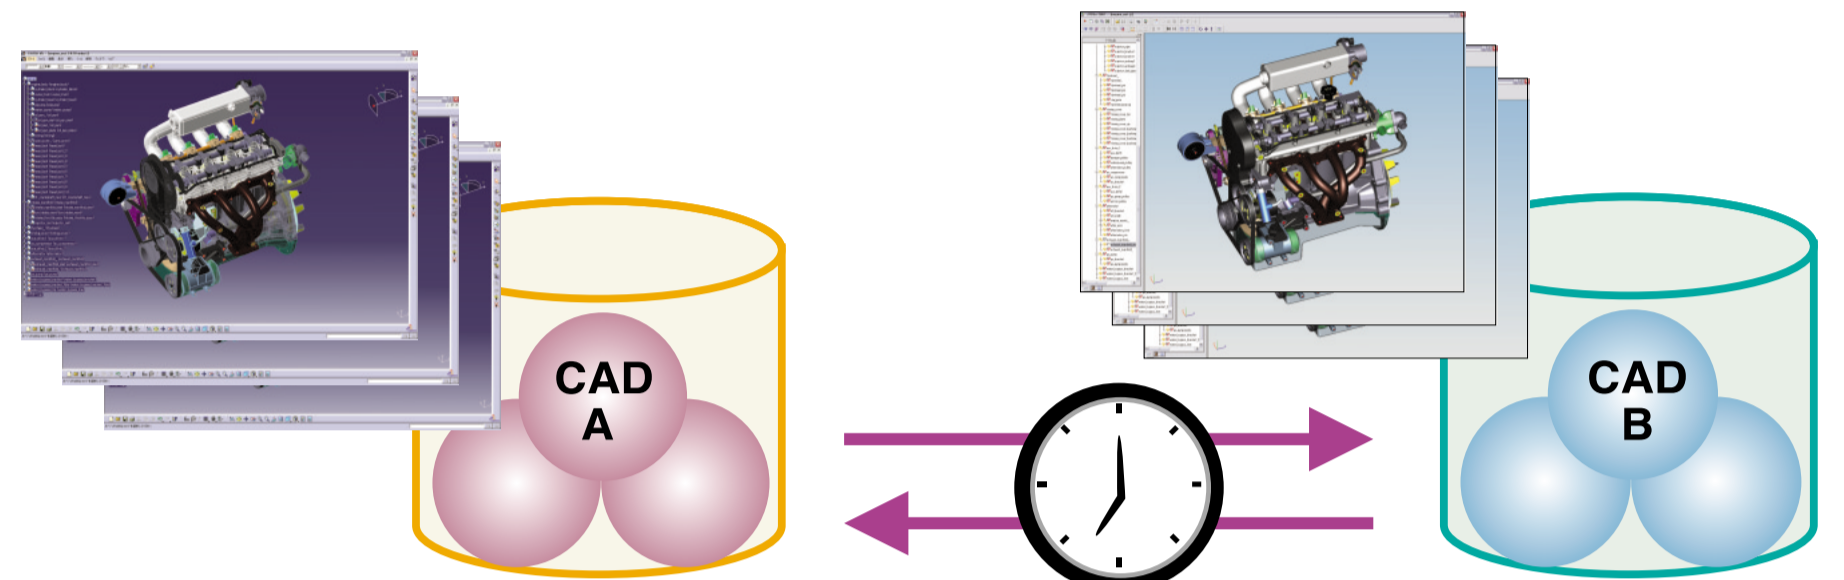

Scalability from Simple Translator to Enterprise-wide Translation Server

ASFALIS allows to build enterprise-wide product data exchange solution to link all the stages of the product development and all the departments concerned. Scalable framework and powerful API allow user to build suitable solution from standalone application to enterprise-wide system.

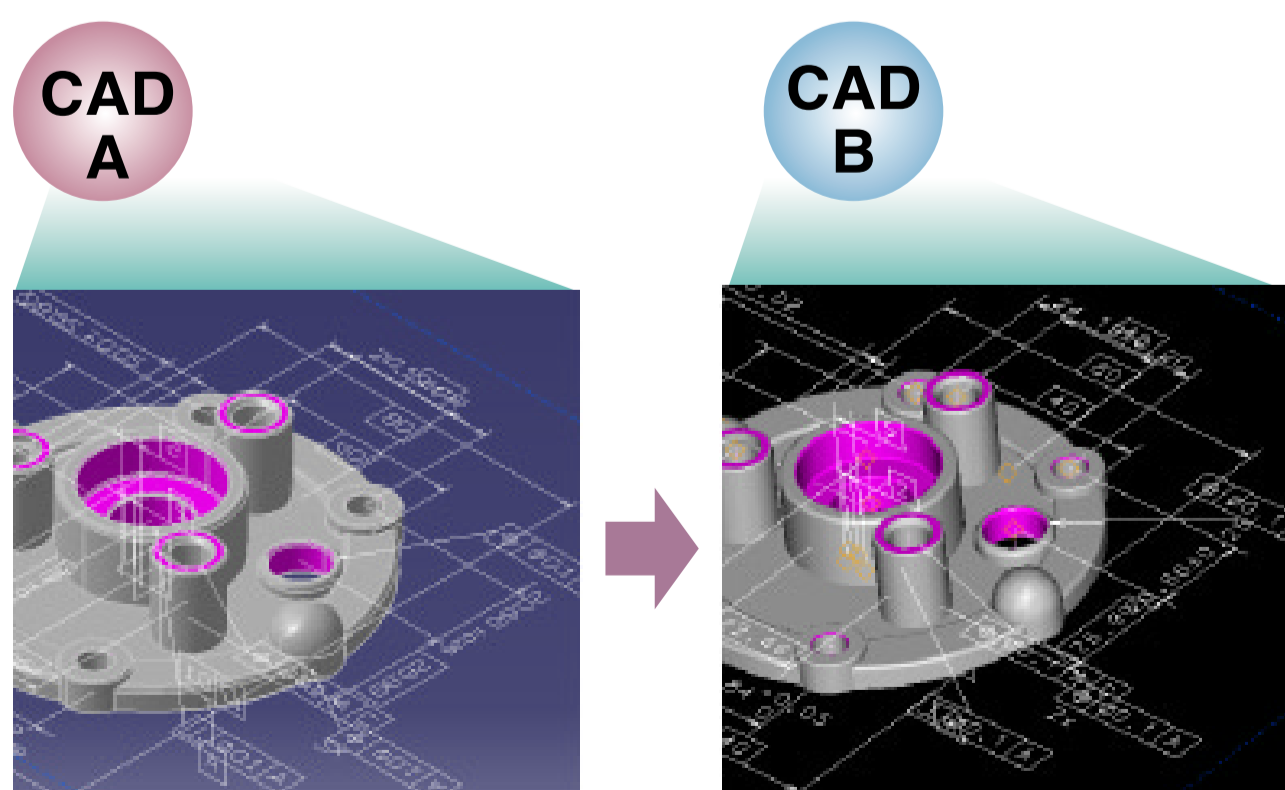

Wizard Batch/ Large-scale Assembly Translation

Get away from cumbersome labour with ASFALIS wizard batch and task scheduler. ASFALIS executes multiple tasks at predefined time. ASFALIS also enables to translate vast amount of files at a time. Freedom from the care for translation enables engineers to make the most of their times in product development.

3D Annotated Model Data Exchange

ASFALIS support translation, viewing and editing of full annotated 3D drawing by combination of ASFALIS Adapter and ENF. ASFALIS Optimizer provide functionality to edit geometry and attributes in ENF, and also extract product information from ENF.

Automate Data Preparation for CAE

CANVAS, a simple front-end application, provides script language to define a wizard scenario for translation and optimization.
